

Chelsea Creek London

Market Sector:
Residential

The Client:
St George

Services supplied:
Carpentry & joinery

THE PROJECT

We were involved in both the design and the joinery of this very high-specification residential building, featuring 140 apartments and five penthouses. We installed (and in some cases designed) doorsets, vanity units, sliding doors, communal panelling and mirrors during the two-year span of this £3.2m project working with St George.

THE PROCESS

Materials were key to the success of this project, because the client required a high level of quality so we worked hard to create samples and later undertake re-staining of door panelling in order to ensure a perfect match throughout the building. We also worked with a lot of veneered materials, which were sprayed off site and delivered to the project. The office fit-out was a complete job, involving drywall partitioning, flooring, staircases, cupboards, rendering and the reception desk.
